## Project Design Phase-I Proposed Solution Template

| Date          | 22 June 2024                |
|---------------|-----------------------------|
| Team ID       | SMTMID1720168902            |
| Project Name  | FOOD MINE – Order On The Go |
| Maximum Marks | 3 Marks                     |

## **Proposed Solution Template:**

Project team shall fill the following information in proposed solution template.

| S.No. | Parameter                                | Description  |
|-------|--|--|
| 1.    | Problem Statement (Problem to be solved) | Streamline the process of ordering food online by providing a seamless, user-friendly platform that connects customers with a variety of restaurants for quick and reliable delivery.  |
| 2.    | Idea / Solution description              | Developing an intuitive mobile app that offers personalized restaurant recommendations, real-time order tracking, and secure payment options to enhance user experience and ensure timely delivery. Implement AI-driven features for smart ordering and promotions to increase customer engagement and satisfaction.   |
| 3.    | Novelty / Uniqueness                     | Our app utilizes advanced AI algorithms to predict and recommend meals based on individual preferences and dietary restrictions. It features a real-time feedback loop for restaurants to optimize delivery routes and times, reducing wait times significantly. Additionally, it offers a unique social component where users can share their favorite orders and reviews with friends, enhancing community engagement.                         |
| 4.    | Social Impact / Customer Satisfaction    | Our app promotes social impact by partnering with local and sustainable restaurants, encouraging eco-friendly choices and supporting small businesses. By providing a transparent platform with real-time tracking, personalized recommendations, and reliable delivery, customer satisfaction is significantly enhanced. The app's community features foster a sense of connection among users, further increasing engagement and satisfaction. |

|    | 1                              | T   |
|----|--------------------------------|---|
| 5. | Business Model (Revenue Model) | Our revenue model includes a commission           |
|    |                                | fee on each order placed through the app,         |
|    |                                | subscription plans for premium features           |
|    |                                | such as exclusive discounts and priority          |
|    |                                | delivery, and advertising opportunities for       |
|    |                                | restaurants. Additionally, we offer data          |
|    |                                | analytics services to restaurants, helping        |
|    |                                | them optimize their operations and                |
|    |                                | marketing strategies. This diversified            |
|    |                                | approach ensures steady and scalable              |
|    |                                | revenue streams.                                  |
| 6. | Scalability of the Solution    | The solution is highly scalable, leveraging cloud |
|    |                                | infrastructure to handle increasing user          |
|    |                                | demand and expanding geographically with          |
|    |                                | minimal effort. The AI-driven recommendation      |
|    |                                | engine and real-time analytics adapt to diverse   |
|    |                                | markets, ensuring relevance and efficiency.       |
|    |                                | Additionally, the modular architecture allows     |
|    |                                | for easy integration of new features and          |
|    |                                | partnerships, facilitating continuous growth      |
|    |                                | and innovation.                                   |
